EDUCATION

Bachelor of Computing

Australian National University

2022 - 2026

Discovering Engineering

Australian National University

Years 11 - 12

Completed enrichment program in engineering disciplines, CAD modeling, and design thinking

Home Educated

Self-Directed Learning

Developed passion for technology through independent exploration of programming, system administration, and server management.

SKILLS

Python 3
Git
Docker Containerization
DNS
Linux administration
Technical troubleshooting

Nathan Woodburn

Technical Support Specialist

SUMMARY

Technical Support Specialist with expertise in Linux, DNS, and network troubleshooting. Experienced in resolving critical domain and network issues, supporting end-users, and collaborating with engineering teams to ensure stable and secure systems. Skilled in Python automation to streamline repetitive tasks and improve operational efficiency.

EXPERIENCE

Web Hosting System Administrator

Dec 2025 - Present

CSIRO - Canberra

- Configure and manage web services
- Managing Kubernetes services
- Building tools to assist with internal processes

Technical Support Specialist

Oct 2022 - Jun 2025

Namebase - Remote

- Provided technical support for users, focusing on domain setup, configuration, and troubleshooting.
- Worked with engineering teams to report bugs and suggest product improvements.
- Diagnosed complex DNS issues including nameserver propagation and zone file errors.
- Gained hands-on experience with recursive and authoritative DNS, DNSSEC, and decentralized naming.
- Engaged with the community through social platforms and represented Namebase at conferences.

Small Business Owner

Feb 2020 - Dec 2023

Nathan 3D Printing Service

- Operated a custom 3D printing and CAD design business independently.
- Handled client communication, design iteration, and order fulfillment.
- Built end-to-end project management and technical design skills.

PROJECTS

Server Lab

Proxmox, Networking, Linux, DNS

- Maintain a personal physical server running Proxmox hypervisor.
- Host multiple virtual machines across three VLANs with isolated firewalls for enhanced security.
- Provide DNS and recursive resolver hosting services for external users.
- Host a suite of self-hosted services such as Gitea, Authentik, Vaultwarden and Nextcloud.

Personal Website

Python 3, Flask, Docker, CI/CD

- Designed modular web application architecture with Flask blueprints and reusable templates.
- Managed containerized deployment using Docker on a dedicated server, ensuring consistency and scalability.
- Implemented CI/CD pipelines for automated testing, building, and deployment from Git.
- Integrated dynamic content and interactive features while maintaining secure and optimized server operations.
